-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 23 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The metes and bounds of claim 23 cannot be determined, because claim 23 does not further limit the claimed invention (see claim 20, claim 23 is a repeat of 20).

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-7 and 28-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Kataumi et al. (USPN 5,445,046).

Kataumi et al. disclose a rotating member engaging member (28); a setting mechanism (12); and a power saving unit (16, 24) that saves power when the setting mechanism attempts to move the rotating member engaging member into position and encounters a force that resists the rotating engaging member being in the rotating member engaging position (when 28 is in between detents the spring 24 will save power);

biasing mechanism comprising a spring (24);

Art Unit: 3682

a control cam (1<sup>st</sup> concave portion of surface 12); cam follower (30) coupled to the rotating member engaging member;

power saving cam (1<sup>st</sup> convex surface of 12).

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 8-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kataumi et al. in view of Leiter (USPN 4, 676,118).

Kataumi et al. show all of the instantly claimed invention except the power saving cam moves between a normal position and a power saving position.

Leiter shows the power saving cam moves between a normal position and a power saving position (see Fig. 3, when the 21 is in between first and second slot 22).

To modify the apparatus of Kataumi et al. so as to move the cam relative to the follower would have been obvious to one of ordinary skill in the art at the time the invention was made in view of the teachings of Leiter that such an arrangement improves maintenance costs by fixing the engaging member such that it is easier to access in the device.
